

Test Bank Cross-Reference

Your chapters, your Phone Link source files, and the two banks your classmate sent

The three sources you are juggling

1. YOUR SOURCE FILES (Phone Link folder). Per exam you have a textbook PDF, a cookbook/test bank, and in maternity a fill-in study guide. These are 10th edition and they are the authority. When anything disagrees, these win.
2. THE MED-SURG BANK - "Real med surg ques.pdf", 1,385 pages, 73 chapters. This is a BRUNNER & SUDDARTH test bank, a completely different textbook from your Ignatavicius. Its chapter numbers do not match yours. Its "Chapter 61" is dermatology, not reproductive. Every number has to be translated, which is what the tables below do.
3. THE MATERNITY BANK - "Old MAT TB.pdf", 318 pages, 34 chapters. This is LEIFER 9TH EDITION - your same book, one edition back. The 10th edition moved Women's Health Care from Ch 11 up to Ch 2 and pushed everything down by one through Ch 11. From Ch 12 on it realigns, then drifts by one again in the peds block.

All page numbers below are PDF page numbers. Type them into the "go to page" box in your reader - they are not printed book pages.

Use these banks to drill question phrasing and answer patterns, not to learn facts. An older or different edition can carry outdated rationales.

MED SURG 2

Your book: Ignatavicius, Concepts for Interprofessional Collaborative Care. Bank: Brunner & Suddarth.

Exam 1 - Reproductive (Ch 61-65)

Your files: MS2 ex1ch61-65.pdf | MS2 EX1 CH61-65 CB.pdf

Your Ch	Your chapter title	Brunner chapter	PDF pages
Ch 61	Reproductive Assessment <i>also Ch 59, pg 1112-1130, for male assessment</i>	Ch 56 - Female Physiologic Processes	pg 1055-1073
Ch 62	Breast Conditions <i>tightest 1:1 match in the entire file</i>	Ch 58 - Breast Disorders	pg 1093-1111
Ch 63	Gynecologic Conditions	Ch 57 - Female Reproductive Disorders	pg 1074-1092
Ch 64	Male Reproductive Conditions	Ch 59 - Male Reproductive Disorders	pg 1112-1130
Ch 65	Sexually Transmitted Infections <i>no STI chapter exists; HIV/AIDS sits apart in Ch 36, pg 693-710</i>	Ch 71 - Infectious Diseases	pg 1332-1349

Exam 2 - Hematologic + Neuro (Ch 33-38)

Your files: MS2 ex2ch33-38.pdf | MS2 EX2 CH33-38 CB.pdf

Your Ch	Your chapter title	Brunner chapter	PDF pages
Ch 33	Hematologic Assessment	Ch 32 - Assessment of Hematologic Function	pg 621-638
Ch 34	Hematologic Conditions <i>plus Ch 34 leukemia/lymphoma/myeloma, pg 657-674</i>	Ch 33 - Nonmalignant Hematologic Disorders	pg 639-656
Ch 35	Assessment of the Nervous System	Ch 65 - Assessment of Neurologic Function	pg 1223-1240
Ch 36	CNS Conditions: The Brain <i>plus Ch 70 (MS/Parkinson/Alzheimer/tumors) pg 1314-1331; Ch 69 (meningitis/GBS/MG) pg 1296-1313</i>	Ch 66 - Neurologic Dysfunction	pg 1241-1258
Ch 37	CNS Conditions: The Spinal Cord <i>WEAK - very little SCI or autonomic dysreflexia here. Do not rely on this bank.</i>	Ch 68 - Neurologic Trauma	pg 1278-1295
Ch 38	Neurologic Emergencies <i>plus Ch 68 head trauma pg 1278-1295; Ch 66 increased ICP pg 1241-1258</i>	Ch 67 - Cerebrovascular Disorders	pg 1259-1277

Exam 3 - Sensory + Musculoskeletal (Ch 39-44)

Your files: MS2 ex3ch39-44.pdf | MS2 EX3 CH39-44 CB.pdf

Your Ch	Your chapter title	Brunner chapter	PDF pages
Ch 39	Eye & Vision Conditions	Ch 63 - Eye and Vision Disorders	pg 1186-1204
Ch 40	Ear & Hearing Conditions	Ch 64 - Hearing and Balance Disorders	pg 1205-1222
Ch 41	Musculoskeletal System (assessment)	Ch 39 - Assessment of Musculoskeletal Function	pg 747-764
Ch 42	Care for Patients with MSK Conditions <i>plus Ch 40 care modalities (casts, traction) pg 765-782</i>	Ch 41 - Musculoskeletal Disorders	pg 783-800

Ch 43	Arthritis & Joint Arthroplasty <i>arthritis strong; arthroplasty care thin (Ch 40, pg 765-782)</i>	Ch 38 - Rheumatic Disorders	pg 729-746
Ch 44	Musculoskeletal Trauma <i>clean 1:1 - fractures, compartment syndrome, fat embolism</i>	Ch 42 - Musculoskeletal Trauma	pg 801-819

Exam 4 - Gastrointestinal (Ch 45-52)

Your files: MS2 ex4ch45-52.pdf | MS2 EX4 ch45-52 CB.pdf

Your Ch	Your chapter title	Brunner chapter	PDF pages
Ch 45	Gastrointestinal System (assessment) <i>plus Ch 44 treatment modalities (NG tubes, TPN) pg 838-855</i>	Ch 43 - Assessment of Digestive/GI Function	pg 820-837
Ch 46	Oral Cavity & Esophageal Conditions	Ch 45 - Oral and Esophageal Disorders	pg 856-874
Ch 47	Stomach Conditions	Ch 46 - Gastric and Duodenal Disorders	pg 875-893
Ch 48	Noninflammatory Intestinal Conditions	Ch 47 - Intestinal and Rectal Disorders	pg 894-911
Ch 49	Inflammatory Intestinal Conditions <i>your Ch 48 and 49 both live in this one Brunner chapter</i>	Ch 47 - same chapter	pg 894-911
Ch 50	Liver Conditions	Ch 49 - Hepatic Disorders	pg 922-940
Ch 51	Biliary System & Pancreas	Ch 50 - Biliary Disorders	pg 941-959
Ch 52	Malnutrition & Obesity <i>plus Ch 5 Nutritional Assessment pg 83-103</i>	Ch 48 - Obesity	pg 912-921

Exam 5 - Endocrine + Renal (Ch 53-60)

Your files: MS2 ex5ch53-60.pdf | MS2 EX5 CH53-60 CB.pdf

Your Ch	Your chapter title	Brunner chapter	PDF pages
Ch 53	Assessment of Endocrine System <i>assessment content is folded into the disorders chapter</i>	Ch 52 - Endocrine Disorders	pg 979-996
Ch 54	Pituitary & Adrenal Conditions <i>SIADH, DI, Addison's, Cushing's</i>	Ch 52 - Endocrine Disorders	pg 979-996
Ch 55	Thyroid & Parathyroid Conditions <i>your Ch 53, 54 and 55 all collapse into this single chapter</i>	Ch 52 - Endocrine Disorders	pg 979-996
Ch 56	Diabetes Mellitus <i>clean 1:1 - DKA, HHS, insulin, hypoglycemia</i>	Ch 51 - Diabetes	pg 960-978
Ch 57	Renal & Urinary System (assessment)	Ch 53 - Assessment of Kidney and Urinary Function	pg 997-1015
Ch 58	Urinary Conditions <i>UTI, incontinence, stones</i>	Ch 55 - Urinary Disorders	pg 1035-1054
Ch 59	Kidney Conditions	Ch 54 - Kidney Disorders	pg 1016-1034
Ch 60	AKI & CKD <i>plus Ch 13 Fluid & Electrolytes pg 260-279, heavily tested alongside</i>	Ch 54 - same chapter	pg 1016-1034

MATERNITY

Your book: Leifer 10th edition. Bank: Leifer 9th edition.

Exam groupings below follow the professor's own "ADN Chapter Alignment_10th Edition" document, which is the ground truth. Note that your Phone Link Exam 3 files are named CH 21-28, but the alignment doc puts Ch 27 and 28 on the FINAL, not Exam 3. Trust the alignment doc for what is tested when; the file still has the right content.

Exam 1 (Ch 2-8)

Your files: [MAT EX1 CH2-8.pdf](#) | [MAT EX 1 CH1-8 COOKBOOK .pdf](#) | [MAT study guide EX 1 CH2-8.pdf](#)

Your Ch	Your chapter title	9th ed chapter	PDF pages
Ch 2	Women's Health Care <i>OUT OF ORDER - the 10th ed moved this from the back to the front</i>	Ch 11 - The Nurse's Role in Women's Health Care	pg 99-105
Ch 3	Human Reproductive Anatomy & Physiology	Ch 2 - same title	pg 10-19
Ch 4	Fetal Development	Ch 3	pg 20-28
Ch 5	Prenatal Care & Adaptations to Pregnancy	Ch 4	pg 29-37
Ch 6	Complications During Pregnancy	Ch 5	pg 38-48
Ch 7	Mother & Infant During Labor and Birth	Ch 6	pg 49-59
Ch 8	Pain Management During Labor	Ch 7	pg 60-69

Exam 2 (Ch 9-14)

Your files: [MAT EX 2 CH9-14.pdf](#) | [MAT EX2 CH 9-14 COOKBOOK.pdf](#) | [MAT study guide EX2 CH9-14.pdf](#)

Your Ch	Your chapter title	9th ed chapter	PDF pages
Ch 9	Complications During Labor & Birth	Ch 8	pg 70-79
Ch 10	The Family After Birth	Ch 9	pg 80-88
Ch 11	Complications After Birth	Ch 10	pg 89-98
Ch 12	The Term Newborn <i>numbering realigns from here</i>	Ch 12	pg 106-115
Ch 13	Preterm & Postterm Newborns	Ch 13	pg 116-123
Ch 14	Perinatal Injury / Congenital Malformation	Ch 14	pg 124-134

Exam 3 - Peds block (Ch 15, 21, 22, 24, 25, 26, 34)

Your files: [MAT EX3 CH15.pdf](#) | [MAT EX3 CH 15 COOKBOOK .pdf](#) | [MAT EX 3CH 21-28.pdf](#) | [MAT EX 3 CH 21-28 COOKBOOK.pdf](#)

Your Ch	Your chapter title	9th ed chapter	PDF pages
Ch 15	Overview of Growth, Development & Nutrition	Ch 15 - same number	pg 135-144
Ch 21	The Child's Experience of Hospitalization	Ch 21	pg 188-196
Ch 22	Health Care Adaptations for Child & Family	Ch 22	pg 197-206
Ch 24	Sensory or Neurological Condition <i>numbering shifts by one from here</i>	Ch 23	pg 207-215
Ch 25	Musculoskeletal Condition	Ch 24	pg 216-225
Ch 26	Respiratory Disorder	Ch 25	pg 226-234
Ch 34	Emotional / Behavioral Condition	Ch 33	pg 302-310

Final - comprehensive (Ch 27-33)

Your files: covered by MAT EX 3CH 21-28.pdf and its cookbook (your Phone Link Exam 3 files run through Ch 28)

Your Ch	Your chapter title	9th ed chapter	PDF pages
Ch 27	Cardiovascular Disorder	Ch 26	pg 235-241
Ch 28	Blood / Blood-Forming Organs	Ch 27	pg 242-252
Ch 29	Gastrointestinal Condition	Ch 28	pg 253-263
Ch 30	Genitourinary Condition	Ch 29	pg 264-272
Ch 31	Skin Condition	Ch 30	pg 273-282
Ch 32	Metabolic / Endocrine Condition	Ch 31	pg 283-293
Ch 33	Communicable Diseases / Bioterrorism	Ch 32	pg 294-301

Not on any of your exams - skip these in the 9th-ed bank

Ch 1 The Past, Present and Future (pg 1-9) . Ch 16-20, the age-stage chapters: Infant, Toddler, Preschool, School-Age, Adolescent (pg 145-187) . Ch 34 Complementary & Alternative Therapies (pg 311-318)

Why "learn the endocrine pathway" is the best advice you got

Your classmates are right, and it is not vague encouragement - it shows up in the data. I counted how often hormone vocabulary (aldosterone, cortisol, ADH, renin/angiotensin, insulin, thyroid/parathyroid, estrogen, testosterone, erythropoietin, corticosteroid, catecholamine) appears in each chapter of the Brunner bank. Endocrine and diabetes lead, as expected. But look at what else is in the top ranks:

Brunner chapter	Hormone-term hits	Which of YOUR exams it feeds
Ch 52 Endocrine Disorders	86	Exam 5 (your Ch 53, 54, 55)
Ch 51 Diabetes	69	Exam 5 (your Ch 56)
Ch 41 Musculoskeletal Disorders	50	Exam 3 (your Ch 42) - osteoporosis is a calcium/PTH/vitamin D/estrogen story
Ch 13 Fluid & Electrolytes	27	every exam - ADH and aldosterone drive every sodium and potassium question
Ch 37 Allergic Disorders	21	Exam 2 adjacent - corticosteroid therapy
Ch 39 MSK Assessment	21	Exam 3 (your Ch 41)
Ch 38 Rheumatic Disorders	19	Exam 3 (your Ch 43) - long-term steroids, Cushingoid effects
Ch 53 Kidney & Urinary Assessment	18	Exam 5 (your Ch 57) - RAAS and erythropoietin
Ch 66 Neurologic Dysfunction	14	Exam 2 (your Ch 36, 38) - SIADH and diabetes insipidus after head injury
Ch 31 Hypertension	12	threads into Exam 5 - RAAS again
Ch 14 Shock	10	every exam - catecholamine and cortisol compensation
Ch 61 Dermatologic Problems	10	topical and systemic steroid effects

Here is the point. Endocrine is not one unit sitting at the end of the semester. It is the connective tissue running underneath all five med-surg exams and all of maternity. Hours you spend on the pathway get spent once and paid back six times. Almost nothing else in this curriculum does that.

Where it actually touches each of your exams

EXAM 1 (Ch 61-65, reproductive) - this entire block IS an endocrine axis. Hypothalamus releases GnRH, anterior pituitary releases FSH and LH, the ovary or testis responds with estrogen, progesterone or testosterone, and those feed back to shut the loop off. Menstrual cycle questions, infertility questions, contraceptive questions, menopause and hormone therapy questions are all one diagram.

EXAM 2 (Ch 33-38, heme and neuro) - two links. First, erythropoietin: the kidney senses low oxygen and tells the marrow to make red cells, which is why kidney disease causes anemia. Second, the pituitary sits in the brain, so head injury, tumors and neurosurgery cause SIADH (too much ADH, dilutional low sodium) or diabetes insipidus (too little ADH, massive dilute urine). That pairing is a classic exam question.

EXAM 3 (Ch 39-44, sensory and MSK) - bone is an endocrine organ. Calcium is controlled by parathyroid hormone, calcitonin and vitamin D. Osteoporosis is what happens when estrogen drops at menopause.

And every autoimmune arthritis patient is on long-term corticosteroids, which produce a predictable Cushingoid side-effect profile you will be asked about.

EXAM 4 (Ch 45-52, GI) - the pancreas is both an exocrine and an endocrine organ, so pancreatitis and diabetes are neighbors. The liver is where glucose is stored and released, and where hormones are cleared, which is why liver failure causes both hypoglycemia and fluid retention. Ascites in cirrhosis is an aldosterone and ADH problem, not just a pressure problem.

EXAM 5 (Ch 53-60, endocrine and renal) - the pathway is not just useful here, it is the exam. Every question is either a gland producing too much or too little, or the kidney acting as an endocrine organ through RAAS, erythropoietin and vitamin D activation.

MATERNITY - pregnancy is a nine-month endocrine event. hCG, progesterone, estrogen, relaxin, oxytocin and prolactin each have a job and a predictable consequence. Gestational diabetes happens because placental hormones create insulin resistance. Postpartum hemorrhage management is oxytocin. Lactation is prolactin plus the oxytocin let-down reflex.

The four things to actually memorize

1. THE MASTER LOOP. Hypothalamus -> anterior pituitary -> target gland -> hormone -> negative feedback back to the top. Once you can draw this, every "is this primary or secondary?" question answers itself, because primary means the target gland failed and secondary means the pituitary failed - and the lab pattern tells you which.
2. THE TOO-MUCH / TOO-LITTLE PAIRS. Learn these as opposites, never separately: Cushing's / Addison's . hyperthyroid (Graves) / hypothyroid (myxedema) . SIADH / diabetes insipidus . hyperparathyroid / hypoparathyroid . acromegaly / dwarfism. If you know one side cold, the other is its mirror.
3. THE FLUID AND BLOOD PRESSURE AXIS. Low blood pressure -> kidney releases renin -> angiotensin II -> vasoconstriction plus aldosterone -> sodium and water retained -> pressure rises. ADH runs alongside it holding water. This one chain explains hypertension drugs, heart failure, shock, cirrhosis ascites, AKI, CKD, SIADH and DI. It is the single highest-yield diagram in the whole curriculum.
4. THE STEROID SIDE-EFFECT PROFILE. Any patient on long-term corticosteroids, for any reason - asthma, lupus, RA, transplant, IBD, eczema - develops the same picture: high glucose, weight gain and moon face, thin skin and poor healing, infection risk, bone loss, mood changes, and adrenal suppression so it can never be stopped abruptly. That one profile is worth points on four different exams.

Practical order: learn the master loop and the fluid/blood-pressure axis first. Those two are what make the rest cheap. Do not start with memorizing individual hormones.
